

# Switching between bottle and back to breast has never been easier.

## Flow Control System

- Flow control valve allows baby to control milk flow.
- Milk only flows when baby creates a vacuum.
- Mimics natural feeding behavior: baby can feed, pause and breathe, similar to breastfeeding.

baby  
controls  
milk flow

Natural feeding behavior supports easy transition from bottle to breast.

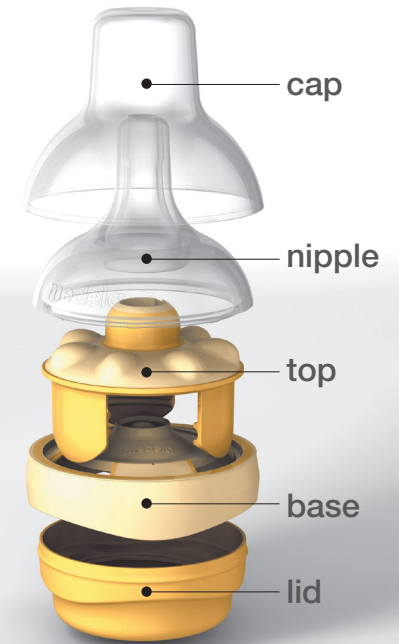

Vented nipple designed to help avoid gassiness.

One size/shape nipple for all stages of breast milk feeding.

## Calma® Parts

# Why Calma<sup>®</sup>?

Calma was developed using evidence-based research on babies' natural feeding behavior so you can enjoy your breastfeeding bond longer.

Your baby has a unique sucking pattern, including pauses to swallow and breathe. By using Calma, your baby is able to feed and pause naturally. This helps to slow down the feed and results in a calm and relaxed baby during and after feeding. This natural feeding behavior supports easy transition from bottle back to breast.
